The Armatti 480 Sport Fly

The largest, most luxurious yacht in the Armatti range comes in the form of the 480 Sport Fly. Built to the highest standards, with an upper deck featuring a second helm, the 480 Sport Fly is as elegant as it is a smooth sailor. Comfort exudes from the long list of fitting and amenities, including: a master suite, two cabins, gourmet station, electric flushing toilets, air-conditioning, fully-fitted kitchen, audio and visual entertainment and more. With endless options for upgrades and customization, the 480 Sport Fly is the epitome of sailing in luxury with Armatti.

Construction

All Armatti Yachts are constructed with manual lamination (Hand Lay-up), which allows a greater care and supervision in the application of the materials. Multi-axial (Biaxial and Triaxial) fabrics are used so that the different layers and directions of the frames offer greater load capacity and structural reinforcement. In addition, every deck and internal parts receives PVC foam (Sandwich known as Divinycell) which leaves the structure highly resistant and lightweight. Isophthalic gel with UV protection. Layer Skin coat with chemical barrier to prevent contamination on contact with water and Coremat fabric that offers a uniform finish.

Fit-Out

The internal fit-out of the Armatti Yachts receives furniture made with high quality materials and coated with special laminate and stainless steel fittings. Depending on the model, the center tables may be in wood or teak. The models that have tables with height adjustment (for the bed) are pneumatic driven, the others are removable in a functional way. The external tables are made in teak for better resistance to the weather conditions. Kitchens and toilets have stainless steel or ceramic sink (depending on options) with quartz stone top (known as Corian®). Upholstery with D33 foam is a feature on every boat, lined with nautical courvin (on sofas) or fabric (on mattresses and internal cushions that also have higher thickness). Only 316 Stainless steel hardware and fittings are used to prevent corrosion. LED lights are used throughout to increase safety and have the added benefit of reducing battery consumption. Only marine grade tempered glass is used for the windshield and windows.
